

We want you to view  
healthcare differently.

# We're here to help you plan for the future.

It's a well known fact that how we live our lives affects how long we live. At 3fivetwo we are committed to ensuring our patients stay fit and healthy. We have added a state of the art medical imaging centre to the increasing portfolio of healthcare services that 3fivetwo now provide in order to help us identify any problems that may arise for our patients well advance. This allows us to address any conditions early so that you can take positive action towards improving your overall health and wellbeing whether that is a simple lifestyle change such as diet or exercise or a form of medical treatment.

## **Medical Imaging & Screening Centre**

Our state of the art Medical Imaging Centre is ideally located on the lower Lisburn road in close proximity to all of the major Belfast hospitals with its own private car parking facilities. Within the 4 storey building we have created a unique and contemporary environment in order for our patients to enjoy our medical services in a relaxed and friendly atmosphere. This environment is also complemented with the highest levels of medical imaging and recording equipment available today making your experience at 3fivetwo like no other.

## **Computed Tomography (64 Channel CT)**

At the core of the imaging centre is the latest Philips Brilliance 64 Channel CT scanner with essence technology. This technology investment ensures that patients can be scanned with the latest technology available and at one of the lowest possible doses of radiation in Ireland. The new Essence CT scanner is so sensitive that it will detect the earliest signs of calcium build up in the coronary arteries, which can be the first signs of heart disease, long before the classic cardiac symptoms manifest themselves to their full extent.

The CT scanner can perform with ease:

- CT cardiac angiography
- CT calcium scoring
- Lung nodule assessment
- Brain perfusion
- Virtual colonoscopy
- Dental implantology
- Bone densitometry
- Advanced vessel analysis

Your experience in the scanner is now also greatly improved as 3fivetwo have installed the first lighting system of its kind in clinical use in Ireland. The walls are free from the usual clutter of a hospital scanning suite and instead are replaced by the calming effect of Philips Ambilight. The entire room is awash with colours helping to take your mind away from the procedure, so that you can focus on the most important thing in the room... you.

### **Mammography (Full Field Digital/ DR)**

Due to the increased demand for both symptomatic patients and asymptomatic screening of the female population, 3fivetwo have installed a full field DR mammography system. The LORAD system once again provides one of the highest quality diagnostic images at the lowest possible dose in the industry and is only the second scanner of this specification in all of N.Ireland. The presence of the mammography system in the imaging centre alongside the breast ultrasound system for biopsy means that the Radiologists & Breast Surgeons can provide a “one stop clinic” for breast assessment. The same day availability of the system will ensure that asymptomatic female patients can receive mammograms at the recommended intervals without delay.

### **Ultrasound**

The centre also has diagnostic radiology ultrasound system from GE healthcare. The Voluson system has the capability to perform with ease the most common examinations

including general abdominal/pelvic, colour Doppler scanning, breast imaging and peripheral vascular regions such as leg and carotid arteries. The majority of our scanning is carried out on site privately by Consultant Radiologists from the local NHS trusts with results issued to the referral source within 48hrs of the scan.

### **Cardiology**

The second floor of the centre is dedicated to all aspects of Cardiology assessment, recording and imaging. Few locations can claim to have such a vast array of modalities in a single location with an ease of access second to none.

The cardiac facilities on site include:

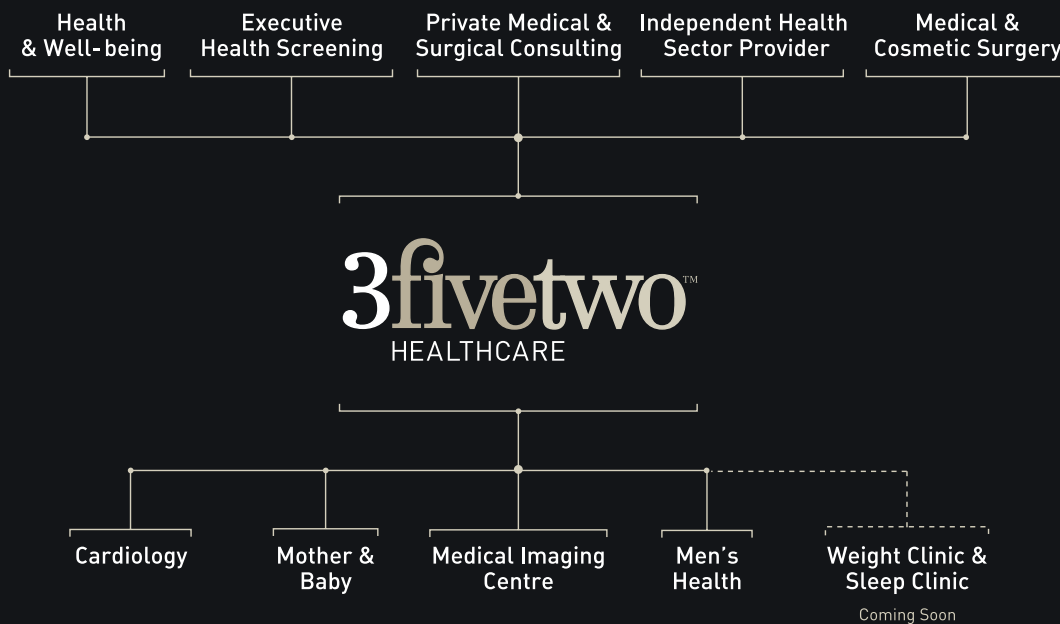

- Cardiac CT scanning for calcium scoring and angiography
- ECG recording
- Treadmill examinations
- Echocardiography including stress
- 24hrs cardiac event recording including BP and ECG

### **Health Assessments**

Along with the specialities mentioned above, we also offer a range of health assessments which can be tailored to suit the needs of the individual. These packages are delivered by a broad section of Consultants from each of the many specialities which 3fivetwo now offer. Please refer to Our Health and Wellbeing brochure for full details.

Across all three of our clinics you will encounter the same open, understanding and knowledgeable service.
